## Project Title: Unicycle Website

I want to build a website that gives a general overview of the world of unicycles, including a navigation bar and separate pages for different aspects like history, models, etc. Below is an outline of the site:

- **Home page:** Definition of unicycle with a large picture of one, as well as unicycle parts with labels (could be designated to one picture or could have a picture of each part with corresponding text)
- **History:** Details the invention of the unicycle and its first commercial uses
- **Common Unicycles:** Includes picture and short text blurb describing each type of unicycle (only concerned with freestyle, trials, mountain, and touring/commuter listed on the Wiki)
- **Riding Styles:** Mostly text, describes the different ways of riding unicycles based on specific use cases (freestyle, comedy, off-road, etc.); could have a large central picture
- **Sports & Conventions:** Describes different unicycle-based sports and conventions, complete with one picture for each item listed
- **Sources:** List Wikipedia source, image sources, and any other sources used
